

Hi all...In case you haven't received any information on the Court LiveScan Project, please read the email below. If you want an actual hands opinion, Phil Giavasis, Clerk at Canton Municipal Court, has been using this system for a while and would be a good source. Debbie

Subject: Court LiveScan Project

BCI is implementing a Court LiveScan Project to improve technology used by the courts for disposition reporting.

We are distributing LiveScan units to Municipal Courts. The units serve two purposes. First, the court can run a rapid identification search on a subject to confirm identity. The result will also immediately return the rapsheet, warrant indicators and notification of whether DNA is on file at BCI. In a future phase, we will add the FBI rapid identification search to include information on Immigration Violators.

The second aspect of the effort is that the LiveScan has the functionality for disposition reporting along with a flat fingerprint image. The benefit is that if the original arrest is not on file – the submission from the court will create the record and will also allow for the fingerprint images to be searchable in AFIS. The flat images will be retained until a better quality rolled image is received. The flat images are much easier and quick to capture than a rolled fingerprint image.

If you are interested in receiving a unit from BCI, there is no initial cost. You will need to send someone to Dublin for training and pickup of the equipment. After the first year of having the system in place – the court will be responsible for annual maintenance at a cost of approximately \$1,500 per year. If the court decides that the unit does not integrate well into its processes - it may be returned to BCI.

If you wish to obtain a LiveScan unit from BCI, you may contact Melissa Winesburg-Ankrom. AFIS Enhancement Project Manager, Ohio Bureau of Criminal Investigation at [740.845.2475](tel:740.845.2475)
